WEATHER SYNOPSIS BY REGION

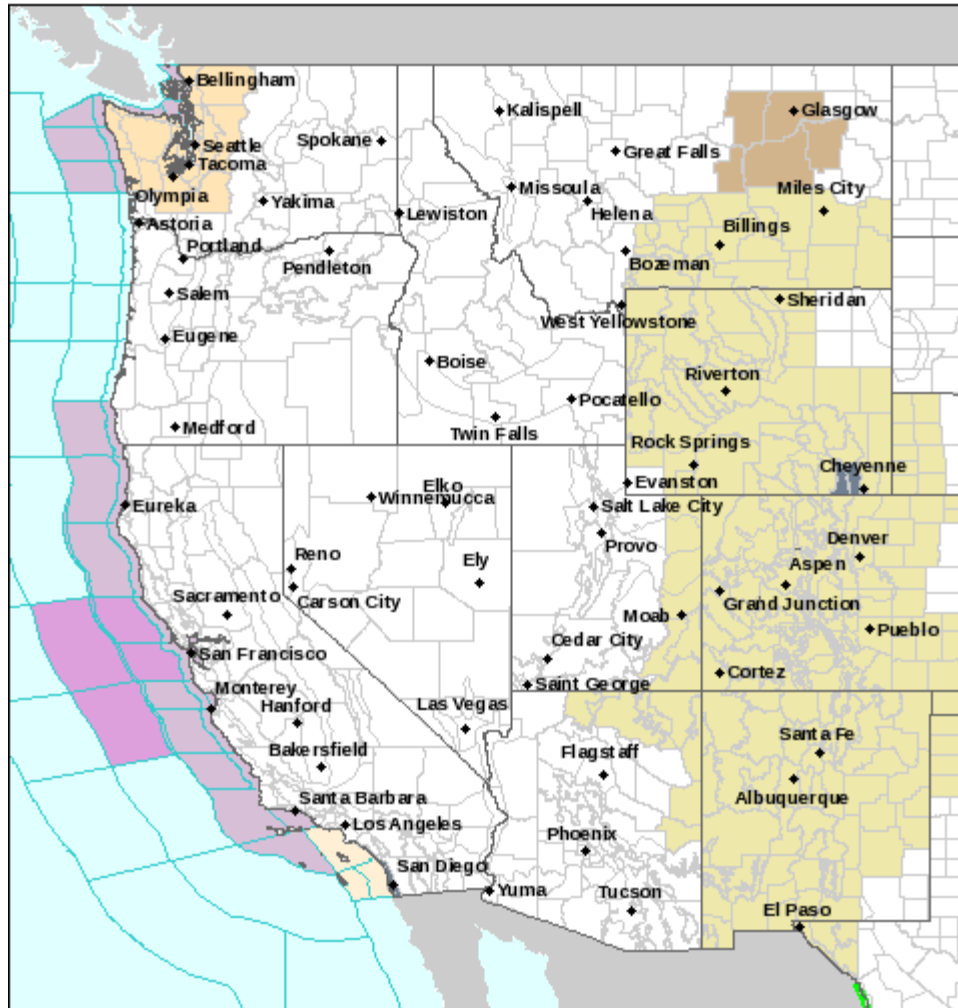

NORTHERN CALIFORNIA

A weak cold front will sweep across northern areas today. Spotty light rain is still expected across the far north including Del Norte, Siskiyou and Modoc counties. The main effect will be an increase in clouds and humidity with strengthening westerly winds. Today, afternoon winds will gust between 25-35 mph along and east of the Cascade-Sierra crest. Temperatures this weekend will be near normal following the frontal passage with drier conditions and weak northerly winds within the Sacramento Valley and surrounding foothills. Models continue to show another cold frontal passage for the Tuesday/Wednesday time frame but they have been waffling on the impacts to the region. Confidence is lower for the Tuesday/Wednesday period so using a persistence forecast at this time.

SOUTHERN CALIFORNIA

Today and into the weekend, a trough will move from the Pacific Northwest into the northern Rockies and Great Basin. This will result in cooler, onshore flow. Highs by the weekend will drop into the 60s along the coast to the lower 80s in the valleys. Some stratus may return to the coastal areas from Los Angeles County southward. It will turn windy each afternoon along the central coast, the Kern County Mountains and the Banning Pass tomorrow and Sunday with wind speeds reaching the 20-30 mph range. In addition, local north winds of 15-25 mph will be possible tonight in Santa Barbara County and the I-5 Corridor. Early next week, a batch of cold air will move from the northern Rockies into the central portion of the state. This may result in much cooler temperatures next Tuesday and Wednesday, particularly over Central California, where temperatures may drop to 10-15 degrees below normal. Due to the dry, inland course this system will take, no widespread precipitation is expected, but cold air aloft may destabilize the atmosphere enough to allow a few showers near the higher terrain next Wednesday.
